

CALLING ALL DOGS!

Join the largest canine health study in the world
and help dogs live longer, healthier lives!

Join at dogagingproject.org

Dog Aging Project

The Dog Aging Project team will follow tens of thousands of companion dogs for ten years in order to identify factors that maximize healthy longevity and help future generations of dogs live the best lives possible. Dogs of all ages are welcome, but the research team can learn the most from dogs who are enrolled as puppies, ideally before they've been spayed or neutered.

Together we can:

Understand how biology,
lifestyle, and environment
influence aging

Intervene to increase
healthspan, the period of
life spent in good health

Join at-home research activities:

- Nominate your dog at dogagingproject.org
- Complete surveys about canine health, diet, behavior, and more
- Upload your dog's electronic medical records
- Engage your dog in at-home behavioral assessments
- Help study the genetics and physiology of aging from your own home

National Institute
on Aging

The Dog Aging Project is a non-profit, academic research study funded by the National Institute on Aging, part of the National Institutes of Health, and other partners. We don't sell products or data. All of our canine participants live and play at home with their families.
